Are Bots & Spam the New Black Gold?

- Spam finance elements:
  - Retail-cost-to-send vs. Profit-per-response
  - Key missing element: spams-needed-per-response, i.e., conversion rate

How can we measure this? Seemingly only knowable by the spammers themselves.

If orders are timer-driven, expect narrow range of timing errors reflecting batch size.

If skewed by outliers, expect up/down or down/up trend around outlier.

If orders not timer-driven, then we just see residuals with respect to underlying order rate \( \Rightarrow \) should have a cloud of points.
